## GUIDE TO THE ASSESSMENT TABLES

<b>Site Details</b>	
Site Size	The gross area of the site as submitted to the Council
Source	This relates to the way in which the site became known to the Council e.g. through the SHLAA exercise or through the consultation process of the current adopted Local Plan.
<b>Suitability for Housing, Availability and Achievability</b>	
Location	The location of the site in relation to settlements will impact on its sustainability in relation to access to public transport, jobs and services.
Policy Restrictions	Current policy restrictions in either national, regional or local policy documents are noted although some policies and designations may be reviewed in emerging plan reviews such as the Core Strategy and West Midlands Regional Spatial Strategy
Physical Constraints	This includes physical aspects directly affecting the site such as flood risk, protected trees and woodland, public footpaths, ground contamination, access difficulties, overhead power lines, high agricultural land quality
Potential Impacts	This is the impact of potential development on the surrounding area such as on areas of high landscape value, Conservation Areas, potential Sites of Interest for Nature Conservation (SINCs), Nature Reserves, or on adjoining land use activities
Environmental Conditions	This includes aspects of the site's location which may impact on the living conditions of future residents such as proximity to areas which are the source of noise or atmospheric pollution or are of poor environmental quality
Overall suitability	Where any of the above constraints cannot reasonably be overcome the site may be considered to be unsuitable either totally or in part. Where there is a current designation, such as Green Belt, the site may be assessed as "potentially suitable". In the case of rural area sites suitability is dependent upon the level of local services and facilities; the scale of the site in relation to the rural settlement; and evidence of local housing needs
Availability	Where sites are submitted to the Council by interested parties or agents, some indication of availability is given on the SHLAA Form. In some cases, availability may depend upon the relocation of an existing use.
Achievability	This is only assessed in the case of sites with some element of suitability. The main consideration will be whether the development would be viable, taking into account the measures needed to secure a suitable development. Some marginal sites may be more dependent upon the strength of the housing market at the time.
<b>Housing Capacity: Sites in, and on the edge of, Urban Areas</b>	
Development Mix	This gives an estimate of the proportion of the suitable site area which is likely to be suitable for housing. The "Other Uses" may use such as employment or supporting uses such as open space and community facilities. (see paragraphs 3.16 – 3.19)
Potential Capacity	Three possible density levels are applied to the area which is developable for housing e.g. 30 x (50% x suitable site area).
Timeframe	Small sites which are suitable, available and achievable are normally placed in the first 5-year period. In the case of larger greenfield sites there may be a longer lead-in period to commencement and consideration is given to the number of homes which can feasibly be built and marketed each year. A density of 40 dph is the norm although on some sites a lower density will be more appropriate and in town centres a higher density is assumed (see paragraphs 3.21-3.23)
<b>Housing Capacity: Sites in the Rural Area</b>	
No detailed assessment of capacity is given for sites in the rural areas as this would depend upon evidence of local housing need
