

Helping you in your home

The Home Environment Assessment & Response Team (HEART) are here to help.

From specialist equipment to major adaptations, we can assess your needs and provide the right solution to help you enjoy your home and make everyday tasks that much easier.

In addition to ensuring you can get in and out of you home safely, we can assess your ability to access:

- the main family room
- a room for sleeping in
- your garden
- the kitchen for food preparation and cooking facilities
- a toilet, bathing and washing facilities

We can also look at more tailored solutions, to make the property safer for a disabled occupant, as well as the provision heating, lighting, and power to meet the assessed needs of the household.

If you think we can help, please get in touch with us today:
